Beta Version of Novitell Solution Complete

Novitell has completed the beta version of the Novitell solution and will be testing the solution with various handsets and telephony setups over the next months. Already it is apparent that the Novitell solution will be a technological market leader with among others the patent pending Sticky Handover functionality (seamless handover between Wifi and GSM).

The features of the Novitell solution are many, but among others the solution provides an integrated GUI, that blends into the mobiles existing GUI thereby making the client very easy to use for the enterprise user. The solution also offers the Sticky Handover – a seamless handover between Wifi, GSM or any other network as well as the possibility to have all PBX features normally only available on the fixed line phones available on the mobile.

The beta version consists of a Dual Mode Client (DMC) and a Dual Mode Gateway (DMGW). DMC is installed on the user's mobile phone while the DMGW is installed at the service provider. The two software solutions work together to validate the quality of the Wifi networks available to the user and secures a seamless handover from Wifi to GSM depending on the quality of the connection.

The Beta version will be tested with companies from various parts of Europe who know and collaborate with Novitell. Their responses in regards to functionality and ease of use will be the basis for the continued development and launch of the Novitell solution in the fall 2009.

Internet telephony (IP) service providers are ideally suited for the Novitell Fusion and the solution is very much welcomed and appreciated by these providers, because it allows them to transfer their superior fixed line telephony offer to the mobile. Also there is no large investment, but only a small initial purchase and a possibility to let capacity grow with the success of the solution.

By purchasing the Novitell Fusion enterprises will experience significant cost reductions on their mobile expenses as well as more mobile, more flexible and far more effective employees. By integrating mobile into the core telephony infrastructure they also have the opportunity to streamline, monitor and manage telephony usage and to a larger extent align mobility with their business strategy.

About Novitell

Novitell was established in 2007 by industry experts seeing a need in the market for a mobile VoIP solution. Novitell is today an international company situated in Denmark, with organizations in both Denmark and Vietnam. Novitell continues to work on the cutting edge of development in order to provide better solutions, with focus on high usability and seamless integration.
