Novitell Fusion gets Symbian approval

Novitell today announced that their mobile VoIP solution the Novitell Fusion has been successfully signed for S60 Symbian mobile phones following the Symbian Signed testing criteria. The Symbian signature validates that the Novitell Fusion works in unison with the mobile phone, which validates the seamless user experience that is a central feature of the Novitell Fusion.

The Novitell Fusion is a mobile VoIP solution tailor-made for enterprises and sold through Internet telephony (IP) service providers, who are ideally suited for this solution that will allow them to transfer their superior telephony offer to the mobile. By purchasing the Novitell Fusion enterprises will experience significant cost reductions on their mobile expenses as well as more mobile, more flexible and far more effective employees. By integrating mobile into the core telephony infrastructure enterprises also have the opportunity to streamline, monitor and manage telephony usage and to a larger extent align mobility with their business strategy.

The features of the Novitell Fusion are many, but among others the solution provides an integrated GUI, that blends into the mobiles existing GUI thereby making the client very easy to use for the enterprise user. Novitell Fusion also offers the Sticky Handover – a seamless handover between Wifi, GSM or any other network as well as the possibility to have all PBX features normally only available on fixed line phones available on the mobile.

The Symbian signing ensures that an application works in unison with the Symbian operating system, and does not affect any other functionalities of the mobile. One of the main features of the Novitell Fusion is the seamless user experience which means that the client on the phone integrates with the existing user interface of the mobile, making the client easy to use and removing the need for extensive support.

“We are of course excited that our efforts to create a truly seamless integration of our advanced handover functionality have not given cause to any remarks from the Symbian folks, even though it is an alteration of the basic call functionality of any given phone and we have used various deep and non-public API’s to achieve this” says Kim Winther, director of development.

About Novitell

Novitell was established in 2007 by industry experts seeing a need in the market for a mobile VoIP solution. Novitell is today an international company situated in Denmark, with organizations in both Denmark and Vietnam. Novitell continues to work on the cutting edge of development in order to provide better solutions, with focus on high usability and seamless integration.
