Novitell Participates in Hosted Services 2009

Novitell will be introducing the Novitell Fusion to the UK market at the Hosted Services event on the 18th of September. The event is focused on how ITSPs can drive improved profitability from hosted services and is an arrangement supported by the Novitell partner Siphon Networks.

Hosted Services is a technology seminar gathering some of the key players in providing solutions for hosted services to present their solution and give their estimate of what features will be relevant for ITSPs to provide their users. The seminar features prominent providers like Broadsoft, AcmePacket, CTI group and Novitell.

Novitell will be presenting the Novitell Fusion solution as well as a presentation of “How to Leverage Existing Network Assets and Launch a Fixed Mobile Convergence (FMC) Service”. Novitell will be represented by CTO Klaus Akselsen and Director of Business Development Steen Rye Jeppesen.

The features of the Novitell Fusion are many, but among others the solution provides an integrated GUI, that blends into the mobiles existing GUI thereby making the client very easy to use for the enterprise user. Novitell Fusion also offers the Sticky Handover – a seamless handover between Wifi, GSM or any other network as well as the possibility to have all PBX features normally only available on the fixed line phones available on the mobile.

Internet telephony (IP) service providers are ideally suited for the Novitell Fusion and the solution is very much welcomed and appreciated by these providers, because it allows them to transfer their superior fixed line telephony offer to the mobile. Also there is no large investment, but only a small initial purchase and a possibility to let capacity grow with the success of the solution.

About Novitell

Novitell was established in 2007 by industry experts seeing a need in the market for a mobile VoIP solution. Novitell is today an international company situated in Denmark, with organizations in both Denmark and Vietnam. Novitell continues to work on the cutting edge of development in order to provide better solutions, with focus on high usability and seamless integration.
